Innovative glass for a better world

Born in **1825** in the heart of the town of Arques, **in the north of France**, **Arc** is the world leader in tableware. For nearly two centuries, the Group's history has been forged through **countless innovations**, with the same leitmotiv, whatever the period: to offer, over the years, **more beautiful, more practical, more resistant, more versatile**, healthier and always more affordable products and services.

Every day the Arc Group produces more than **4.3 million items**, half of which leave its factory in Arques in the North of France.

All the articles produced by the Arc Group are made of glass. Infinitely recyclable, insulating, non-flammable and resistant, **glass** is by definition **a sustainable material**.

The Arc Group has long been aware of environmental issues and has been committed for several years to a process that promotes the **circular economy**, by striving, for example, to **natural resources**, or to integrate **sustainability criteria** into the design of its products and offerings.

In many countries, single-use plastic containers will soon be banned (Egalim law in France). To support these changes, the Arc Group's marketing and R&D teams have developed **durable, reusable and returnable glass containers**, specifically designed for restaurants, takeaways and deliveries. In addition to being made of glass, **a healthy material that guarantees organoleptic quality and health safety**.

For professionals, breakage problems are a regular occurrence.

In order to increase the lifetime of product by 10 to 50 times, in 1958, our research and development center developed and perfected since then, a technical process known as «tempering».

This process provides products with excellent resistance to heat and mechanical shock.

Our items are fully tempered.

Savings in terms of budget and restocking costs:

a tempered glass can be up to 5 times more resistant than an item that has not undergone any specific treatment process.

Tempered products resist to temperature variations till 130 °C:

they can thus be removed from the oven (or from a salamander) and placed directly in cold water without the risk of breakage.

*except for So Urban - thermal shock resistance 110°.

Completely safe for table service*:

when a shock or series of shocks manage to rupture the exterior shell of the tempered glass, the resulting glass shards are not sharp to the touch*.

*According to the thickness. Cannot be applied to tempered Opal.

In 1958, the Arc research and development department developed and perfected since then a new material generation for dinnerware: Opal.

Food service professionals all over the world have opted for that all-round **professional material** solution that is **economical, ecological and practical**.

Up to **3 times more shock-resistant** than porcelain: the secret of its unbeatable durability.

As **efficient in keeping food hot** as other materials such as porcelain. (at the same thickness and weight)

C&S

Catering professionals are increasingly offering a pricing range that varies according to the weight of the food that their customers take.

To ensure that it is as fair as possible, they need products the weight of which does not vary or varies only slightly from one item to another.

This is where Arcoroc™ comes in, **by controlling the weight of its items**, whether the products are made from Zenix™, Opal or glass.

Within our Arcoroc™ offer, for certain references that are strategic for the venue, **we guarantee a tolerated weight standard** according to the following rule:

- +/- 10 g for items weighing ≤ 500 g

- +/-15 g for items weighing > 500 g
